# Documentation

The documentation covers fifteen countries – with fifty-one different regions – that I have visited over the years. It illustrates the diversity, similarities and particularities of the elementary building technique of corbelled dome structures.

The journey begins in Spain, traveling from west to east and then to the north of Europe. It continues on to North Africa (Morocco) and then to Syria and Turkey, where the corbelled dome structures are made of mud bricks, ending with the millenium-old funerary architecture of Oman and Egypt (Sinai).
